Foreword	7
-----------------	----------

What is a national quality registry?	9
A quality registry brings together patient data from multiple care providers 9; Quality registries cover a significant proportion of inpatient physical health care 10; Quality registries for monitoring health care systems 11; Quality registries for decision support 12; References 14	

The history of quality registries	15
An idea takes shape 15; What happened after Codman? 18; The origins and early development of Swedish national quality registries 20; References 25	

Measuring quality in health care	26
What is quality within health care? 26; What should be measured? 27; Quality registries are an integrated feature of knowledge management 30; Quality registries have a democratic role 31; How do quality registries relate to evidence-based medicine and value-based medicine? 33; Criticism of quality registries 35; References 38	

Organisation of quality registries	40
The Swedish health care system in brief 40; Quality registries are developed and managed by care professionals 41; Broader engagement in registry work 44; Quality registries are financed through national funding and by health care 45; National support 46; Opportunities and challenges for the registry organisations 48; Quality registries in other countries 49; References 51	

The role of quality registries in health care improvement	53
Three dimensions of care quality 53; Improvement knowledge and models for improvement work 54; Improvement efforts supported by	

quality registries 58; Other ways registries contribute to better care and health 64; Impatience and humility 65; References 66

Quality registries in management 68

Clinical outcomes for management in care 68; Microsystem level 70; Mesosystem level 71; Macrosystem level 74; References 75

Research using quality registries 76

Research and quality improvement 76; Planning and implementing clinical studies 78; Estimating frequency of outcomes (endpoints) 78; Observational studies 78; Interventional studies 82; Things to think about when planning to carry out research using quality registry data 82; The development of Swedish quality registry research 85; The future perspective 85; References 88

Indicators in quality registries 90

What is a quality indicator? 90; Quality indicators within health care 93; Considerations when choosing a set of indicators 96; The pros and cons of an overall appraisal of indicators 101; Quality indicators are not perfect instruments 103; References 104

Patients as active co-creators 105

Using patient-reported measures within health care 105; Why use patient-reported measures within care? 106; The benefits of patient-reported measures 109; Different types of patient-reported measures 111; The patient as a co-creator 115; References 118

Data quality 119

Target population 119; Criteria for data collection 120; Additional dimensions that affect data quality 123; Calculating coverage 123; Validation 124; Monitoring 127; Traceability and documentation 128; Missing data 128; Training 129; References 129

Legal aspects of quality registries 131

Integrity protection versus quality assurance 131; The patient has the right to decline to be registered 132; The patient must always receive information 133; Individuals with reduced capacity for decision-

making 134; What national quality registries may be used for 134; National quality registries in the direct care of patients 135; Responsibility for personal data 136; Cooperation is as important as legal aspects 137; Patients can contribute data 137; Care providers have access to reported data 138; Guidelines for processing personal data 138; References 139

IT as a requirement for modern quality registries 140

Registry platforms 140; Data collection for quality registries 142; Double registration 142; Effective IT support in data collection 144; Output data 145; References 147

Quality registries in health care education 148

Teaching quality registries 148; Difficulties integrating quality registries into teaching 149; The interview study highlighted some good examples of how learning about quality registries is integrated into health care education. 150; The interview study also highlighted some good examples of how registries and registry centres work hand-in-hand with health care education 151; References 153
